

The World's First & Finest Liquid Seaweed Plant Food

# Maxicrop®

## COMPLEX

Contains: 16% W/V concentrated Seaweed Extract Plus N.P.K. 7. 3. 2-1

### All purpose plant & soil nutrient

combines all the benefits of pure Maxicrop seaweed extract with 100% soluble forms of Nitrogen, Phosphorus and Potassium, which are readily taken up by the leaves and roots. Maxicrop Complex contains 34.8% W/W Total Solids with 16% W/V soluble Seaweed extract. The growth promoting properties of Maxicrop are here combined with additional major nutrients, (N.P.K.) making Maxicrop Complex a valuable plant food. Nitrogen, Phosphorus, and Potassium are included at the rate of 7%, 3% and 2.1% W/V.

- ✓ **Natural organic seaweed base**
- ✓ **Scientifically proven results**
- ✓ **Increases root and shoot development**
- ✓ **Increases resistance to insect and fungal attack**
- ✓ **Better resistance to frost or climatic stresses**
- ✓ **Greater soil microbial activity**
- ✓ **Increases chlorophyll in leaves**
- ✓ **Long lasting accumulative benefits**
- ✓ **Economical and easy to apply**
- ✓ **Increase crops profits**
- ✓ **Available in 20, 110 & 200 Litre containers**

#### Greater soil microbial activity

Maxicrop stimulates beneficial soil microbial activity especially around the plant roots. This improves rooting, and also helps to fight off diseases and soil pests; at the same time, the microbes work within the soil to release more nutrients to the plant.

#### Increased chlorophyll

Maxicrop increases levels of chlorophyll- the green pigment essential for plant development. This ensures better use of energy from the sun, fuelling strong, healthy growth.

#### Stress relief

Maxicrop acts within the plant, raising its natural defence mechanisms to a higher level. As a result, it is better equipped to resist pests and diseases as well as adverse environmental conditions, diverting more of its energies into growth, with reduced stress.

#### Increased frost tolerance

Maxicrop helps plants withstand the pressures of frost, reducing damage at critical stages of growth.
