

Maxicrop®

Organic Seaweed Solution

Maxicrop Seaweed Solution

is a non-burning organic plant tonic that contains Maxicrop seaweed extract and provides naturally occurring growth stimulants with over 60 trace elements. It is not a chemical fertiliser, however it can be used in conjunction with fertilisers. It is safe to use on all plants and is absorbed through the plant foliage or roots.

Benefits:

- Enhances strong healthy root and shoot development to establish plants faster and reduce the effects of transplanting shock.
- Feeds beneficial soil micro-organisms.
- Improves fruiting and flowering.
- Helps increase nutritional value for better shelf life.
- Better resistance to climatic conditions, frost, drought, heat.
- Stress relief by raising the natural immune system of the plant to help resist insect and fungal attack.

Handy Uses:

Seeds: For increased germination and better root development. 1 capful (9mL) to 3L of water. Soak large or hard seeds (peas beans etc.) overnight before sowing. Sow small seeds then water gently with the diluted solution.

Seedlings: For reduced transplant shock and faster establishment. 3 capfuls = (27mL) per 9L watering can. Stand seedlings/plants in solution for 30 minutes before planting, then plant seedlings and water them in with the Maxicrop diluted solution. Apply every 2 weeks.

Transplanting: 3 capfuls = (27mL) per 9L watering can. Fill the hole with the diluted solution and let it soak away, then plant and water in with the diluted solution. Water with diluted solution every 2 to 4 weeks.

NEW

Ideal for use at planting.

ECO FRIENDLY

Handy Tips:

- 600mL concentrate makes up 200L of solution or re-fills the 2L Hose-on 2 times.
- 3 capfuls per 9L watering can.
- 2L Hose on pack will treat up to 100m².
